

United Rentals

PowerHawke, Inc. is providing United Rentals with a multi-year, one-stop-shop program for preventive maintenance on the electrical distribution equipment at their corporate data center since 2010. A rotating schedule of energized and de-energized service is coupled with on-call dispatch for system alarms and a block of service for routine monthly maintenance.

De-Energized Services:

- Clean/Lubricate/Exercise Breakers
- Current Injection Testing
- Emergency Generator Load Bank Testing
- UPS/PDU Testing

Market:

Energized Solutions

Date:

Ongoing

Location:

CT

Their service program includes a private web portal for all assessment/test reporting, an equipment database, and a work order log to manage monthly activity. United Rentals has amortized within their multi-year agreements for a number of service call hours to cover miscellaneous electrical work.

As of early 2015, PowerHawke is also coordinating the major and minor generator service through a second-party provider, eliminating management on United Rentals part.

Energized Services:

- Infrared Assessment
- Visual Code Inspection
